

ABSTRACT OF THE DISCLOSURE

--The invention relates to an anesthetic syringe. In order to provide an An improved, very wieldy anesthetic syringe that allows for precise and repeated injection, it is suggested that has a first hydraulic chamber ~~be provided~~ behind a feed piston and a second hydraulic chamber ~~be provided~~ behind the first hydraulic chamber, the hydraulic chambers being connected so as to allow for regulation of the flow resistance. A special ~~receiving means~~ receiver for cannulae that have been specifically developed for use with the proposed syringe is also ~~suggested~~ provided.--
